PITTSBURGH -- An accident in which a woman drove her car through a Pittsburgh Tuesday has prompted new questions about whether older drivers should continue driving.

An 85-year-old woman, who drove her car through a vacant Hollywood Video store in the Squirrel Hill neighborhood, told relatives how the accident happened.

But investigators said skid marks left on the gas and brake pedals, Channel 11 News reported.

statistics indicate that more accidents happen at intersections – 54 percent.

It's always the same reaction...

“What can we do about these older drivers?”

British study suggests that older drivers are safer drivers

by Jeremy Korzeniewski (RSS feed) on May 1st 2008 at 7:2

Contrary to the findings of the Japanese Metropolitan study has just been released in Britain which suggests drivers are **not dangerous** on the roads. The Institute of Motorists (IAM) data shows that older drivers actually of a risk than drivers under the age of thirty. Unfortunately drivers over the age of seventy are more likely to be

Older Driver Safety Awareness Week Highlights Options for Safe Mobility

enter friendly  view / write op

Local Network Assists Capital Address Problems, Safety Issues

by New York State Office for the Aging
ALBANY, NY (12/08/2009)(readMedia)-- This week marks the Older Driver Safety Awareness Week by the American Older Driver Safety Awareness Week aims to highlight the importance of mobility and transportation to ensure community - shopping, working or volunteering - will not be the barrier to strand them at home.

Healthy Aging : Preparation can help keep older drivers safe on the road

BOSTON, MA — Chronic illnesses and the use of various medications increase the risk for auto accidents. Even normal, healthy aging can take a toll on a man's reflexes, reaction time, and sensory abilities. But proper preparations and precautions can help keep older men safely on the road, says the Harvard Men's Health Watch. For example:

Policy Goals

- Provide evidence-based guidance for improving state driver medical review processes and outcomes
- Maximize safety and mobility for older, medically at-risk drivers

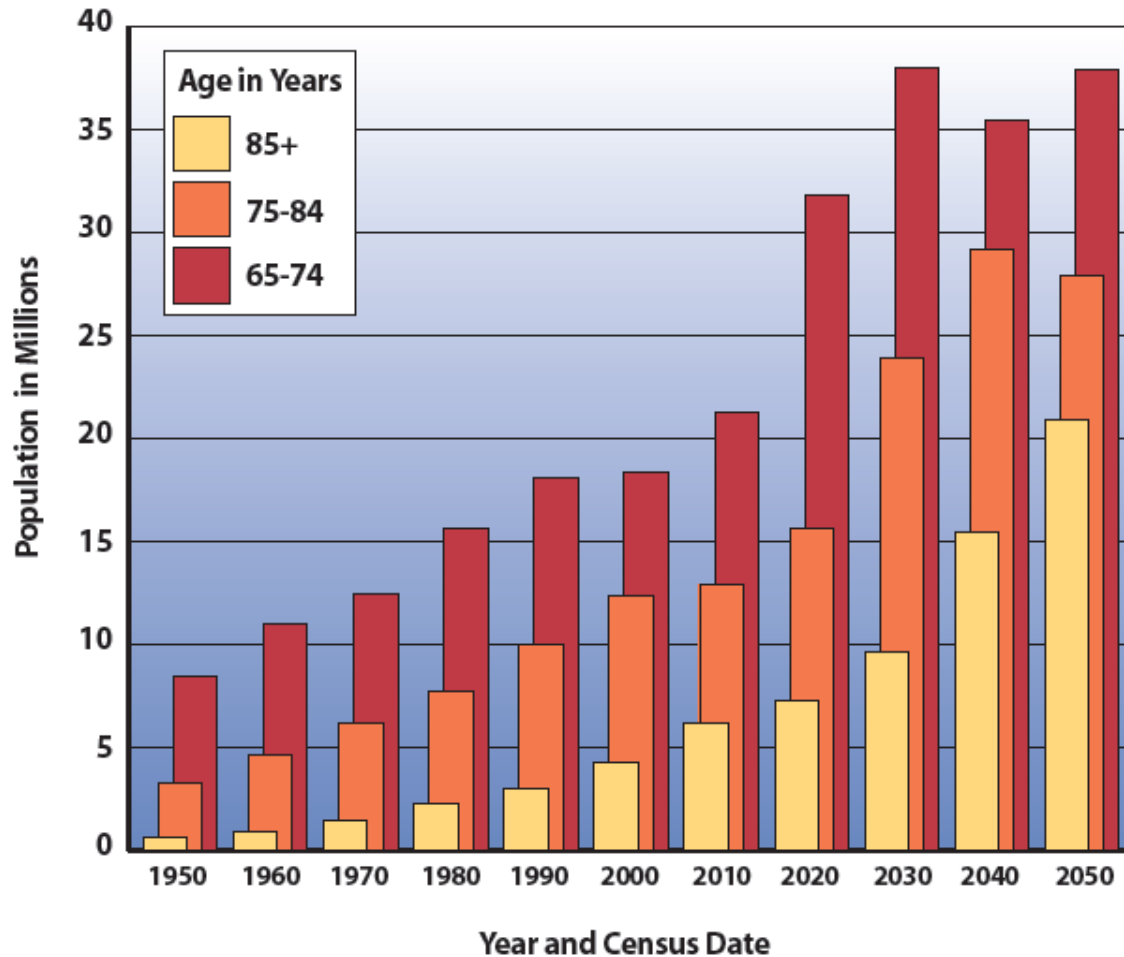

Why focus on Driver Medical Review?

- Importance of driver medical review in light of **growing population of older drivers**
- DMV mandate to ensure persons licensed possess basic **qualifications needed for safe operation** of their vehicle
- Considerable **state-to-state variation** in driver licensing policies and practices
 - “Standard licensing requirements”
 - Procedures and requirements for more formal review of potential medically at-risk drivers

Shifting Demographics

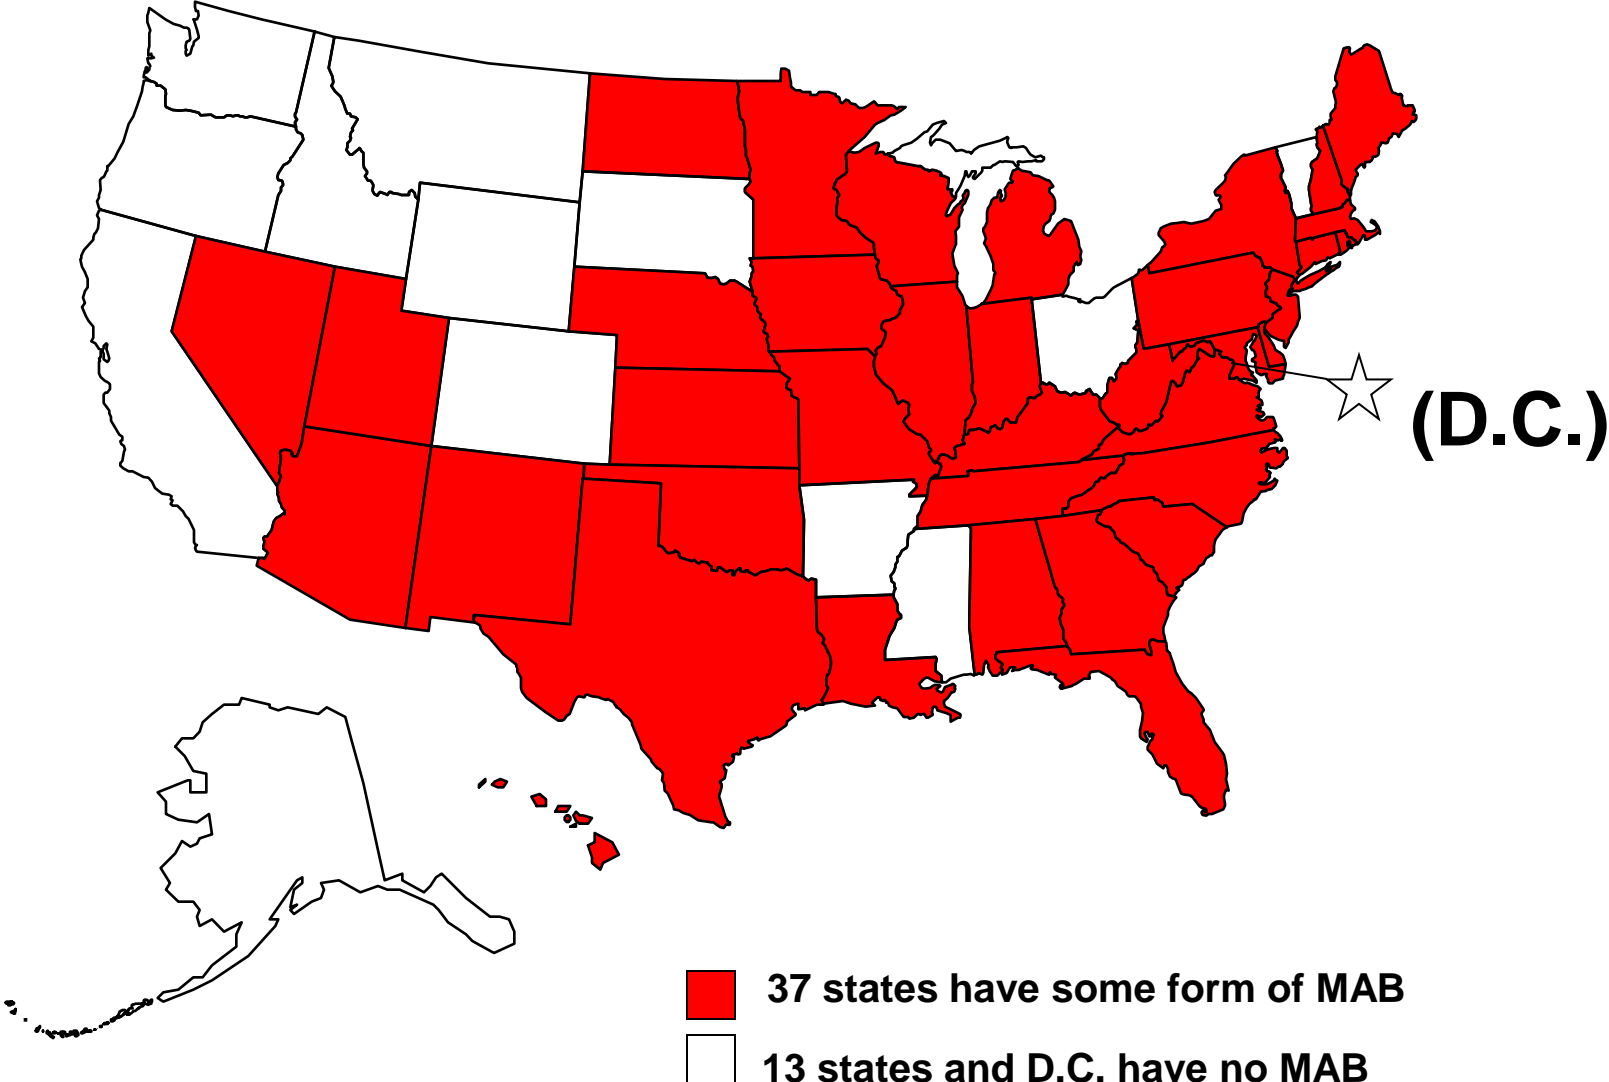

Older Population by Age: 1950 - 2050

Source: U.S. Administration on Aging based on data from U.S. Census Bureau

States with Medical Review or Advisory Boards

First Attempt...

- Synthesize State of Knowledge
- Develop Consensus-based Recommendations
- Identify Gaps & Research Needs

Seeking Policy Options for States

- **AAA initiates research project to evaluate available evidence**
- **Synthesized research and expert consensus recommendation from over 100 published reports**
- **Established in-kind consultation from CDC, NHTSA and NAS/TRB**
- **Developed white paper and accompanying advocacy toolkit**

Grouping Policy Options

- **Works** – Evidence is sufficient to warrant a recommendation
- **Likely to work** – Evidence is weak or lacking, but the practice has been successfully applied by one or more DMVs and/or recommended in national/international consensus documents
- **Does NOT work** – Evidence is sufficient to recommend NOT adopting a particular policy/practice
- **Unclear** – Evidence is mixed, so that no clear recommendation can be made at this time

Focus of AAA Recommendations

- **Identification & referral of medically at-risk drivers**
 - by DMVs
 - by physicians and other health professionals
 - by law enforcement
 - by family members or friends
- **Assessment of potential medically at-risk drivers**
- **Post-assessment options for medically at-risk drivers (balancing safety and mobility)**

Two Key Assumptions

- The target population for driver medical review is drivers of any age who are at increased risk of crashing due to medical-related functional impairments.
- Licensing decisions should not be determined by disease diagnoses, but by an individualized assessment of fitness to drive.

Improving **Identification** of Potential At-Risk Drivers

- **What Works**
 - In-person license renewal
 - Visual acuity testing at license renewal
- **What is Likely to Work**
 - Medical self-report at license renewal
 - Forms for easy physician and LE referral
 - License examiner observational training
 - Healthcare provider immunity for referral in good faith

Improving **Assessment** of Potential At-Risk Drivers

- **What is Likely to Work**
 - DMV access to medical expertise (MABs)

Policies & Practices Related to Case Disposition

- **What Works**
 - Restricted licensing
- **What is Likely to Work**
 - Driver rehabilitation / remediation

Tools to Assist in Putting it Together

A State-by-State Look at Driver Medical Review

Issue Brief (w/Snapshot) & State Policy Charts

Quick reference to:

- Current state- and national demographics on senior drivers
- Current practice in each state

Policy Approaches: Senior Driver Safety and Mobility in Alabama

Senior Drivers: A Profile

Among our roadways' safest drivers

Compared to other drivers, seniors as a group are less likely to speed, less likely to drive after drinking, and more likely to buckle their seat belts. Seniors also tend to avoid high risk driving situations, such as driving at night, on unfamiliar roads, or in poor weather conditions.

Older adults are involved in fewer traffic crashes and tend to travel fewer miles than their younger counterparts. However, today's seniors can expect, on average, to live for 7-10 years beyond their ability to drive safely, so for the first time in history, we must plan for the possibility of our driving retirement just as we plan for our retirement from work.

The Challenge: Maintain Safe Mobility

The impact of medical conditions on safe driving

While seniors as a group are generally safe drivers, increasing age is generally associated with a decline in the functional abilities important for driving, including vision, reaction time, and dividing attention between tasks. Older adults also have a greater occurrence of cardiovascular disease, and many seniors on the road is not age but an increased risk of crashing an

The Solution: Evaluate

Driving is a function of ability

Just because someone is 75, 85 or compromised. Drivers age off and mobility must take this real rather than on the basis of chro

Know the Facts

People over 65 represent the fastest growing age group in the U.S., and by 2030 about one in four licensed drivers will be among them.

Alabama Snapshot (2009)

- 670,347 licensed drivers are age 65+
- That's 17.7 percent of all licensed drivers

National Snapshot (2009)

- 32.9 million licensed drivers are age 65+
- That's 15.7 percent of all licensed drivers

Alabama: Policies and Practices to Improve State Driver Medical Review Systems		4/11/12
Identification of At-Risk Drivers	POLICY APPROACH In-person license renewal for older drivers: <i>Allows for a range of opportunities for DMV staff to identify and refer potential at-risk drivers</i>	MEETS AAA RECOMMENDATIONS? Yes • Alabama requires in-person license renewal for all drivers every 4 years
	Vision testing at license renewal: <i>Declining sharpness of sight may be a sign glasses or contacts are required, or it may mean that an eye condition needs further evaluation by a health care provider</i>	No • Alabama requires vision testing for all drivers when renewing at a state facility ¹ AAA recommends requiring visual acuity testing for all drivers at every in-person renewal
	Form for easy physician referral: <i>Having a readily available form makes it easier for healthcare providers to refer a potential at-risk driver</i>	No • Alabama has an official referral form for healthcare providers but the form is not available online AAA recommends that states make available for healthcare providers an official form for initial referral that is accessible electronically
	Form for easy law enforcement referral: <i>Having a readily available form makes it easier for police to refer a potential at-risk driver</i>	No • Alabama has an official referral form for law enforcement but the form is not available online AAA recommends that states make available for law enforcement an official form that is accessible electronically
	Healthcare provider immunity for referral in good faith: <i>Healthcare providers may be discouraged from referring a patient if they can be sued for breach of confidentiality and violation of patient-doctor privilege</i>	Yes • Alabama offers civil and criminal immunity for state-licensed physicians who refer potential medically at-risk drivers in good faith
Assessment of At-Risk Drivers	DMV access to medical expertise: <i>Most states have established Medical Advisory Boards to advise on medical policy and assist with individual case reviews. However, a few states have adopted other models for obtaining needed medical expertise</i>	Yes • Alabama has a Medical Advisory Board that advises on policy regarding medically-at-risk drivers and is available to provide input on individual cases
	Restricted licensing: <i>By restricting driving to lower risk situations (e.g., during daytime only, on lower speed roads, close to home), medically at-risk drivers can lower their crash risk while prolonging mobility</i>	Yes • Alabama may issue conditional licenses that may include restriction such as daytime only, speed and/or road type, distance from home or requiring special vehicle equipment
Adjudication of At-Risk Drivers	Driver rehabilitation or remediation: <i>Some drivers may be able to compensate for risky medical conditions and functional impairments by making modifications to their vehicle and/or learning new driving strategies to lower crash risk</i>	Yes • Alabama may refer at-risk drivers to occupational therapists and driving rehabilitation specialists

¹ Alabama drivers receive vision screening when they renew in-person at an AL Department of Public Safety (DPS) state facility. Drivers may also renew their licenses at many of their local courthouses across the state. However, it could not be confirmed with the AL DPS whether the local renewal process involves the same vision examination.

 - Tennessee
- **AAA Northern New England**
 - Vermont
 - New Hampshire
 - Maine
- **AAA Arizona**
- **AAA New York**

Life Beyond Driving

Transportation Options

- **People today can expect to live 7-10 years beyond their ability to drive safely**
- **Mobility beyond driving will require a combination of services to meet individual needs**
- **Importance of planning early and building comfort in leveraging alternatives to driving**
